a. Computer
b. Internet Connection(to get Google JQuery files)

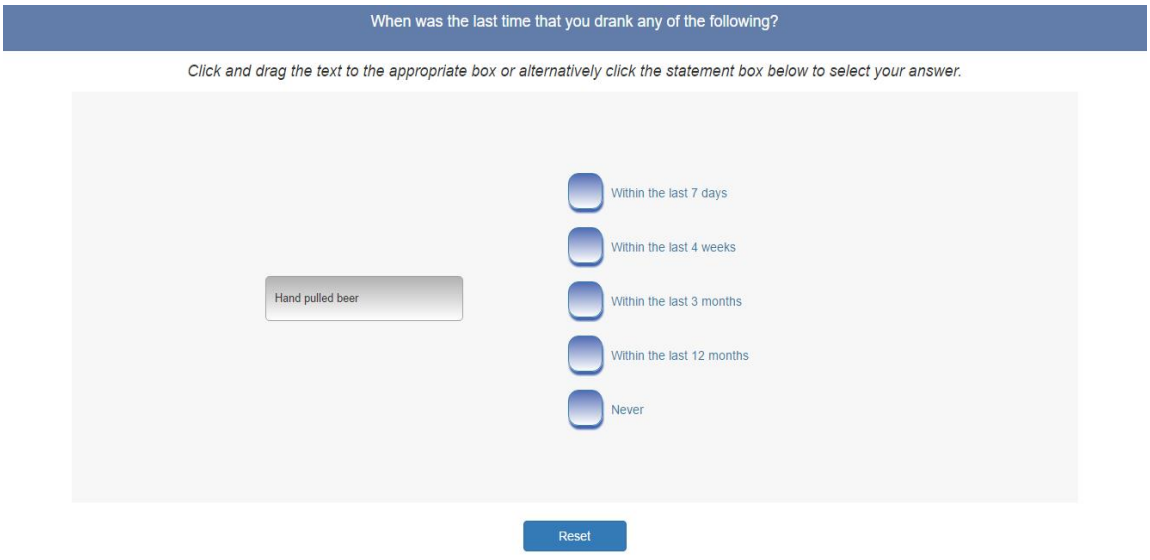
4. Technologies Used

a. Html5
b. CSS3
c. JavaScript
d. JQuery
e. Bootstrap
f. Dreamweaver (IDE)

5. Description

It is a tool for answering the question using drag and drop method or either by clicking the answer.

- Landing page look like this
  => There are 5 statements and 5 options. Only one statement is displayed on screen.
  => After answering the first statement second one appears.



=> Select answer either by dragging the statement on to the option or by clicking the option.
=> At any point you can reload the page by clicking the reset button
=> The options get highlighted on hover. As shown below

=> If you drag the statement somewhere else other than on the options, the statement will return to its initial position.
=> While dragging the statements, it becomes transparent as shown below

Test Cases

1. Test all elements are aligned as shown in the main screenshot.
2. Check whether the statements can be dragged properly and options are droppable.
3. Check whether options get highlighted on select.
4. Check whether each statement appears on the screen with animation. (enter from left hand side)
5. Check whether statement's background gets lighter on hover.
6. Check whether the statements become transparent while dragging.
7. Check whether a black tick mark appears on the corresponding option while clicking the option.
8. Check whether the page get refreshed on reset button click.
